Under-counter basin installation guide

Important Information:

Please check the products for transport damage and that contents are complete before installation.

Consult a qualified plumber if you have any problems installing this product.

Complaints made following installation regarding the above cannot be accepted.

Thank you for purchasing this product.
Before you start check you have the necessary tools for installation.

-  Before you begin: Always handle our products with care and attention. Ceramic products are brittle, and may chip, crack or break if not handled carefully. Broken ceramic is extremely sharp. Take care not to over tighten screws and fittings. Over tightening may lead to breaks or chips in the ceramic. These instructions are for installing the basin on a solid wall only. For other installations including wall bracing please contact us directly for further guidance. Before installing the product, please inspect for damage incurred during transport. Imperial cannot take responsibility for damaged products after or during their installation. We recommend that the guidance of a qualified plumber is sought throughout the installation process. Imperial reserves the right to amend the design of its products without notice, as specified in the company catalogue.

INSTALLATION:

Imperial would once again recommend that a qualified plumber carry out the installation of this product.

1: Position the marble countertop upside down on foam padding (or any soft protective surface) to protect the marble surface. Secure the anchor into the pre-drilled holes inserting the largest end first into the marble as shown below. It may be necessary to tap the anchor into the hole using a mallet. If this is the case do so very carefully taking care not to chip or crack the marble. It is advisable to use a rubber mallet or use a piece of wood between the anchor and the mallet to prevent accidental contact with the marble surface.

2: Apply a continuous bead of sealant to the top surface of the basin rim where it will contact the marble countertop. Carefully position the basin into location and using the clamps and screws provided secure into position. Allow the sealant to cure as per the manufacturers recommendations before carefully turning the marble over and positioning onto the stand.

3: Check that the marble top sits level. Once you are fully happy with the fit of the marble surface on the stand complete the necessary plumbing in of taps and waste fittings.

CARE & MAINTAINANCE:

Ceramic: The glazed finish of your sanitary ware should be cleaned after use by applying a little cream type cleaner. Apply using a sponge or damp cloth and rinse thoroughly with clean water. Cleaners containing abrasive materials should be avoided.

Metal: Parts with Chrome/Gold finish should be cleaned with a damp soft cloth only. The use of detergents and abrasive cleaning agents should be avoided, as these will cause damage to the finish of the metal.

Marble: Little maintenance should be necessary other than regular cleaning. This should be done with clean warm water and a soapless detergent of near neutral ph. Buff up with clean dry cloth. The use of strong detergents and abrasives should be avoided as these can damage the natural stone.
